Importance of Geospatial Information:

“In Namibia a country in which water is a scarce resource...spatial data is only below water in significance”

Minister Alpheus G. !Naruseb, Minister of Lands and Resettlement, Namibia

“We envisage a dynamic Pacific if we can be assisted in implementing the UN-GGIM Resolutions for geospatial information. We need to put in place a solid framework from local to national then regional level”

Tevita Boseiwaqa, Permanent Secretary for Lands and Mineral Resources, Fiji

How can you measure and monitor sustainable development...

...without location and geography

UN-GGIM

United Nations Initiative on
Global Geospatial Information Management

"Positioning geospatial information to address global challenges"

ggim.un.org

Genesis of UN-GGIM

- In 2009, the United Nations Statistics Division/DESA (UNSD) convened in New York, on the side of the 9th United Nations Regional Cartographic Conference for the Americas (UNRCC-A), an informal consultative meeting with geospatial information experts from different regions of the world, and discussed how to better coordinate the various regional and global activities on geospatial information and the related management issues.
- At its substantive session in July 2011, Economic and Social Council (ECOSOC) considered the report of the General Secretary and adopted a resolution to create the United Nations Committee of Experts on Global Geospatial Information Management (2011/24), asking to present a Report on 2016 to propose the creation of the Geospatial Information Commission of The United Nations.

UN-GGIM: Why a global mechanism?

- Significant gap in the recognition and management of geospatial information globally
- Lack of a global consultative and decision-making mechanism among Member States in:
 - setting global standards on geospatial information;
 - developing common tools; and
 - bringing geospatial information to bear on global policy issues
- This gap is increasingly being filled by the private sector, reducing the role and influence of Governments
- Governments, not the private sector, have the mandate and accountability to maintain and deliver the national geospatial information base and related policy

UN-GGIM

Global Geospatial Information Management

"Positioning geospatial information to address global challenges"

ggim.un.org

UN-GGIM: A global initiative

Formal inter-governmental Committee of Experts to:

- Coordinate Global Geospatial Information Management activities by involving Member States at the highest level as key participants
- Make joint decisions and set directions on the use of geospatial information within national and global policy frameworks
- Address global issues and contribute collective knowledge as a community with shared interests and concerns
- Develop effective strategies to build geospatial capacity in developing countries

UN-GGIM: Global Agenda

1. Global geodetic reference frame.
2. National institutional arrangements in GI management.
3. Global map for sustainable development and status of mapping in the world.
4. Legal and policy frameworks.
5. Establishment and implementation of standards.
6. Linking of geospatial information to statistics and other data.
7. Integration of land and marine GI.
8. Activities on GI within the United Nations system and to the United Nations Conference on Sustainable Development.
9. Development of a knowledge base for GI.

Some Results of the Initiative

Sessions of the United Nations Committee of Experts on Global Geospatial Information Management:

1. Seoul, Republic of Korea, October 2011.
2. United Nations Headquarters, New York, August 2012
3. Cambridge, United Kingdom July 2013
4. To be held, United Nations Headquarters, New York, August 2014

UN-GGIM

United Nations Initiative on

“Positioning geospatial information to address global challenges”

ggim.un.org

Some Results of the Initiative

High Level Forums and Workshops on Global Geospatial Information Management:

1. Seoul, Republic of Korea, October 2011- 350 experts from 90 countries, 22 United Nations representatives and 37 representatives from international organizations and the private sector.
2. Doha, Qatar, February 2013- 350 participants from 60 Member States, international organizations, the private sector, and UN entities.
3. Chengdu Forum on UN-GGIM Global Map for Sustainable Development. October 2013, Chengdu, China
4. HLF on The Role of Geospatial Information in Measuring and Monitoring the Sustainable Development Goals. United Nations Headquarters, New York January 2014.
5. Workshop on Integrating Geospatial and Statistical Information. Beijing, China June 2014
6. Statistics and Geospatial Information. United Nations Headquarters, New York, August 2014.

Creation of a Regional-Global architecture for UN-GGIM

- UN-GGIM Co-Chairs (2014-2015), Dr. Vanessa Lawrence, Ordnance Survey U.K and Dr. Eduardo Sojo, INEGI Mexico

UN-GGIM Regional Committees:

- UN-GGIM for Asia-Pacific (formerly PCGIAP) November 2012
- **UN-GGIM for the Americas (formerly PC-IDEA) August 2013**
- UN-GGIM for Arab States February 2013
- UN-GGIM for Europe August 2014
- UN-GGIM Africa 2014

UN-GGIM:Americas´ Working Groups

1. WG on geospatial data collection and management.
2. WG on access and use of geospatial information in disaster risk reduction and climate change.
3. WG on Standards and technical specifications
4. WG on regional coordination and cooperation.
5. WG on promotion and assessment of Spatial Data Infrastructure

CARIBBEAN PROJECT

Scale 1:12,500,000

Lambert Conformal Conic Projection,
standard parallels 9°N and 17°N

Boundary representation is not necessarily authoritative.

General Objective

Promote the development of Spatial Data Infrastructure in 16 countries in the Caribbean, to strengthen the generation, use and sharing of geospatial information.

Specific Objectives:

- Reduce the Geospatial Data Infrastructure gap in the region, with respect to the other countries of the Continent
- Support the integration and participation of 16 Caribbean countries in the UN-GGIM: Americas initiative.

Strengthening the Region

Regional Collaboration Project scheduled for execution
in three years (2014-2016)

Specific Actions

- 1. Diagnosis of National SDI
- 2. Capacity Building
- 3. Acquisition of Infrastructure
- 4. Incorporation to UN-GGIM

**Establishment of National
SDI**

Aligned to UN-GGIM:
Americas key actions

Promote
Regional Interoperability

UN-GGIM

ggim.un.org

Benefits for the Caribbean Countries

Top Geospatial Benefits

1. Having infrastructure and knowledge to advance in the development of the national SDI in each country.
2. Advance the construction of a Geodetic Reference Framework Regional and Continental for geodetic survey standardization.
3. Enable information access and exchange among the 16 countries and the whole Continent.
4. Have information for regional-plan design and implementation.

Incorporation to UN-GGIM:

- UN-GGIM4
August 6-8, 2014, New York City.
- UN-GGIM: Americas
September 22-25, 2014,
Mexico City at the Latin America Geospatial Forum.

Caribbean Geodetic Reference Frame.

- GNSS for:
- Providing a spatial georeference within International Terrestrial Reference Frame (ITRF)
- Linking the Caribbean to Geocentric Reference System for the Americas (SIRGAS).
- According to the diagnosis, the acquisition of the necessary equipment in each country will be implemented, they will be strategically distributed in the geographic area of influence.
- This will be done according to international standards, which will contribute to regional interoperability and building the SDI of the Caribbean.

Interoperability

- A geomatic solution will be developed consistent with hardware, software and procedures integrated in the query, analysis and publication system of the georeferenced statistical and geographic information.
- The geomatic solution will be implemented on the Mexico Digital Map platform, V. 6.0.
- The design solutions will allow each country to publish its geographic services compliant with international standards in order to achieve regional interoperability and the Caribbean Spatial Data Infrastructure building.
