## GEODESY FORUM

# FOR UN GGIM: AMERICAS

Cristian Araneda H.

- Vice-Presidente UN-GGIM: Américas
- Secretario Ejecutivo  
Sistema Nacional de Coordinación de Información Territorial de Chile

▶ Geodesy for Sustainable Americas

## What are the first “focus areas” to work?

1

### Communication and Outreach

We must communicate

**why**

What will we solve?

What is the relationship between geodesy and sustainable development?

We must make known the importance

2

### Education, Training and Capacity Building

Training of new geodesists

Strengthen university careers

Promote new graduate programs

Promote new Master programs

New and more professional people

3

- Governance
- Geodetic Infrastructure
- Policies, Standards and Conventions

UN-GGIM:Americas

## How would it contribute to the regional and/or global framework?

It would be aligned with other Sustainable Development initiatives

Greater research capabilities

Understand the value of an investment

Accurately quantify changes in sea level

UN-GGIM:Americas

## What are the expectations of a Global Geodetic Center of Excellence?

- A network of several member states working under a coordinated governance model
- Educational support, training and capacity building
- Policies, Standards and Conventions
- Geodetic data Findable, Accessible, Interoperable

**Thanks!**
