Data sharing amidst the crisis

Geovisor to support crisis management

El futuro es de todos
Gobierno de Colombia

Integration of Statistical and Geospatial Information for better decisions

Objective: To give statistical and geospatial information to support decisions for crisis

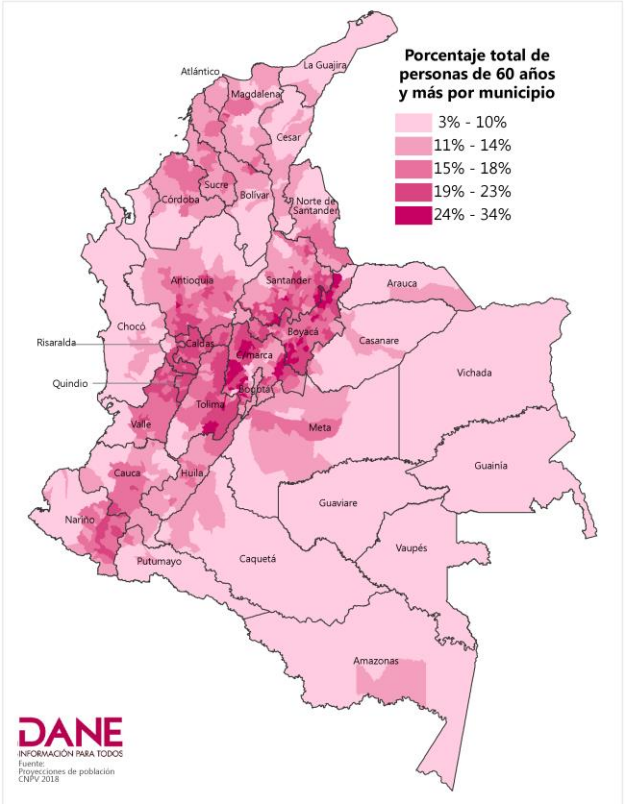
- Timely information
- Easy to use
- Hight level of geographical disaggregation
- Inter-institutional partnerships

Information is power, but only if people are able to access, understand and apply it

Calculation of the vulnerability index per block using demographic variables and comorbidities

Integrate different sources of official information to identify vulnerability take into account:

- Age
- Adult population in intergenerational households
- Comorbidities: Hypertension, Diabetes, Ischemic heart disease, Chronic lung disease: and Cancer.
- Overcrowding
- Access to public services



Results: Calculation of the vulnerability index per block using demographic variables and comorbidities
