Project for the Strengthening of Spatial Data Infrastructures in Member States and Territories of the Association of Caribbean States

**Capacity Building Program** 

#### **Geographic Information Systems**

Dr Earl Edwards Ms. Valrie Grant, MSc.

#### Topic 2: Planning and Implementing a GIS

Association of Caribbean States Asociación de Estados del Caribe Association des Etats de la Caraïbe A MEXICANA DE COOPERACIÓN INTERNACIONAL PARA EL DESARROLLO

## **Topic Outline**

- Types of GIS Implementation
- Traditional GIS Approach
- Enterprise GIS
- The GIS Development Cycle
- Needs Assessment
- GIS System Integration

## ...if you were building your dream house, would you use blueprints?

Association of Caribbean States Asociación de Estados del Caribe Association des Etats de la Caraïbe AGENCIA MEXICANA DE COOPERACIÓN INTERNACIONAL PARA EL DESARROLLO

#### **The First GIS**

- In 1962 Roger Tomlinson was credited with developing the first operational GIS
- It was called the Canada Geographic Information System (CGIS)
- This GIS was developed for Canada's Federal Dept. of Forestry and Rural Development.

Association of Caribbean States Asociación de Estados del Caribe Association des Etats de la Caraïbe A MEXICANA AGENCIA MEXICANA DE COOPERACIÓN INTERNACIONAL PARA EL DESARROLLO

#### **GIS Types**

Departmental	Enterprise				
Desktop mapping	Client/Server GIS				
Data is redundant, stored on individual machines or departmental servers.	IS maintains data centrally and spatial data becomes integrated with existing databases.				
	Users access data many different ways				
The Beginning	The Project				
Desktop mapping	Traditional GIS				
Consultants or small in-house efforts.	In-house GIS support group.				
	Large server.				
	Strong GIS software tools used.				

Number of Users

## **Types of GIS Implementation**

- Project
- Single department application (Departmental GIS)
- Multi departmental application
- Enterprise system (Enterprise GIS)
- Multi Institutional endeavor (Community GIS)

#### **Traditional GIS Approach**

Association of Caribbean States Asociación de Estados del Caribe Association des Etats de la Caraïbe AGENCIA MEXICANA DE COOPERACIÓN INTERNACIONAL PARA EL DESARROLLO

#### **Enterprise GIS Approach**

#### **Enterprise GIS Approach**

What is Enterprise GIS?

A geographic information system that is integrated through an entire organization so that a large number of users can manage, share, and use spatial data and related information to address a variety of needs, including data creation, modification, visualization, analysis, and dissemination

Wade, T. and Sommer, S. eds. <u>A to Z GIS</u>

#### **Spatial Data Infrastructure (SDI)**

#### What is an SDI ?

Comprises of the relevant base collection of technologies, policies and institutional arrangements that facilitate the availability of and access to spatial data.

A spatial data infrastructure provides a basis for spatial data discovery, evaluation, download and application for users and providers within all levels of government, the commercial sector, the non-profit sector, academia and the general public.

#### **SDI Hierarchy**

#### **Components of an SDI**

Fundamental Datasets	Data			
Users, Providers, Communication, Collaboration	People			
Policy, Legislation, Coordination	Institutional Frameworks		>	SDI Framework
Access, Acquisition, Distribution, Storage	Technology			
Data Models, Metadata, Transfer Standards	Standards	)	)	

#### Building a GIS is Like Building a Pyramid

## A 10-Stage GIS Planning Methodology

Tomlinson, Thinking About GIS

- Consider the strategic purpose
- Plan for the planning
- Conduct a technology seminar
- Describe the information products
- Define the system scope
- Create a data design
- Choose a logical model
- Determine system requirements
- Benefit-cost, migration and risk analysis
- Make an implementation plan

Association of Caribbean States Asociación de Estados del Caribe Association des Etats de la Caraïbe

PERACIÓN INTERNACIONAL PARA EL DESARROLLO

**Conceptual Design** 

Logical Design

Physical Design

Implementation

#### GIS Development Guides State of New York, Local Government Technology Services (1997)

#### **GIS Development Cycle**

- Needs Assessment
- Creation of an implementation plan
- Develop a theoretical framework
- Survey of Available Data
- Survey of GIS Hardware and Software
- Detailed Database Planning and Design
- Database Construction
- Pilot Study/Benchmark Test
- Review/modify the original plan
- Acquisition of GIS Hardware and Software
- GIS System Integration
- GIS Application Development
- GIS Use and Maintenance

UN-GGIM:Américas COMITÉ REGIONAL DE LAS NACIONES UNIDAS SOBRE LA GESTIÓN GLOBAL DE INFORMACIÓN GEOESPACIAL DARA LAS AMÉRICAS

## **Needs Assessment**

- A needs assessment is the first step in implementing a successful GIS within any enterprise
- A needs assessment is a systematic look at how departments function and the spatial data needed to do their work
- In addition to the final needs assessment report that is generated, intangible benefits are realized by an organization

#### **Basis for Needs Assessment**

- Describing their needs to the GIS analysts
- Learning what the GIS will be capable of accomplishing for them
- Understanding the nature of the GIS development cycle - the time involved and the costs.
- This is the single most important element in GIS development
- Must consider 3 factors:
  - Who are the users?
  - What is the end product?
  - Who is going to manage the GIS ?

#### **Conducting a Needs Assessment**

- The most significant aspect of a needs assessment is to document the findings in a standard and structured manner.
- Very important to adopt or develop a standard method to be used for the description of all the GIS tasks, processes and data that will be included in the needs assessment.
- Need to develop forms for use

#### **Needs Assessment Activities**

- The main activities will be:
  - Conduct "start-up" (technology) seminar or workshop
  - Interview each potential user
  - Prepare documentation (forms) for each application, etc
  - Review each application description with the user
  - Obtain user approval of and sign-off for each application description

## **Purpose of the Technology Seminar**

- Introduce GIS to the participants (if necessary)
- Introduce GIS terminology and methods that will be used
- Introduce the planning process
- Explain to participants the reason why the work is being done
- Make clear the nature of the contribution required of participants
- Afford participant the opportunity to assess their work
  needs and identify the information that would help
- Compose a list of information products needed by the organization
- Opportunities for improving business workflows using GIS

#### **Results of the Needs Assessment**

- At the conclusion of a needs assessment, an organization will have all of the information needed to plan the development of a GIS system:
  - The Applications to be developed
  - The GIS Functions required
  - The Data needed in the GIS database
  - The Data maintenance procedures.

## The implementation plan

- Define the scope of the project
  - Spatial boundaries
  - End products
  - Participants/users
- Create project goals and timelines
- Assign responsibilities

#### **Develop a theoretical framework**

- Sketch out how things will work
  - Work flow
  - Data flow
  - Quality assurance
  - Documentation
    - Procedures!!!!
  - Training and consensus building

#### Survey available data

- DO NOT RE-INVENT THE WHEEL!!!
- Become familiar with the origin of data
- Look to see who is producing data

#### Survey of hardware and software

- Do not just limit software search to GIS packages
- Include all of the software being used by prospective users – see if it can integrate
- Likewise for hardware most organizations use many different platforms
- TALK TO VENDORS AND GET ON SITE DEMONSTRATIONS

#### **Detailed database planning and design**

- For our purposes we'll always base things upon a DBMS
- Many ways to diagram, but we'll use Entity-Relationship (ER) diagrams
- For GIS, it's best to construct ER diagrams based upon connectivity (cardinality)

#### **Entity-Relationship (ER) Diagram**

Association of Caribbean States Asociación de Estados del Caribe Association des Etats de la Caraïbe A MEXICANA DE COOPERACIÓN INTERNACIONAL PARA EL DESARROLLO

#### Database Construction: Additional Considerations

- What will be the source for each data item?
- How will sharing be arranged? . . purchase? . . license? . . other agreement?
- Who will own the data?
- How will new GIS data be integrated with existing data files (legacy systems)?
- Who will be responsible for updates to the data?
- How will the cost of the data (creation and maintenance) be allocated?
- Who will provide public access to the data?
- Who will be responsible for data archiving and retention? ... of the original? ... of copies?

#### **Pilot Study/Benchmark Test**

- Pick a subset that is representative of all assets/areas to be incorporated in the GIS
- Involve all parties and users
- GET FEEDBACK!

#### **Review and modify**

- Review and modify plan
- Achieve buy-in
- Do not move forward until pilot study complete and all users are satisfied

#### **Purchase hardware and software**

- Talk to your purchasing guys up front
- Learn the purchasing "rules"
- Competitive bids

#### Roll it out

- System integration
- Subsequent application development
- Use and maintenance

## **GIS System Integration**

- Bringing the final database and the hardware and software together and testing their combined operation.
- GIS hardware and software have been acquired and data conversion is complete or at an advanced stage
- Different components of the hardware and software may have been purchased separately
- It is now necessary to put all the pieces together, test them to make sure they work as expected,

## **GIS System Integration**

- GIS Software
- GIS Hardware
- Network
- Database

Association of Caribbean States Asociación de Estados del Caribe Association des Etats de la Caraïbe AGENCIA MEXICANA DE COOPERACIÓN INTERNACIONAL PARA EL DESARROLLO

Association of Caribbean States Asociación de Estados del Caribe Association des Etats de la Caraïbe A MEXICANA DE COOPERACIÓN INTERNACIONAL PARA EL DESARROLLO

#### What Comes Next?

- Application Development
- System Testing
- User Training
- Maintenance

#### **Transaction Studio - Desktop**

#### <u>Activity</u>: Planning for a GIS in your Organization

## Planning A GIS Activity Guide?

- Why do you need a GIS?
- What information products do your organization require?
- What is the current business process for the most use information product/application?
- For this information product what data do you require? Define your master data list
- How will you source the data?
- What functions and Applications do you need for this information product?
- What would be your software needs?
- What hardware will you require?
- What are your Human resource requirements?
