Alternatively, the declaration may be signed on behalf of the importer by any firm, company or individual to whom the importer has given the authority to act as an agent for Customs purposes. The manner of authorisation is a matter of arrangement between importers and their agents, but in giving authority to an agent the importer will be assumed to have given authority to the clerks and servants authorised by the agent, to carry out all the Customs business of the importer.

The Commissioner of Customs may request verification of an agents authority to act on behalf of an importer at any time.

(i) Customs Procedure Codes

Customs Procedure Codes (CPC's) identify the customs regimes to which goods are being entered and from which they have been removed (when this applies). The lists of Customs Procedure Codes have been compiled from lists supplied by the BVI and other national administrations and represents procedures applicable throughout the Organisation of Eastern Caribbean States (OECS) and wider region.

Effort has been given to produce a comprehensive list, but it is expected that revision may be necessary in the light of experience. Users are advised to check with the Customs Entry Processing Unit for assistance in cases of uncertainty.

The Structure of the Codes

The code consists of two parts. The first identifies the regime e.g. Imports, Exports, Warehousing for which the goods are entered and the second part further identifies how the goods are to be processed with the regime.

The complete codes are known as Customs Procedure Codes because as the name implies they identify the procedure that Customs should apply to the declared goods.

The codes used are made up from an alphabetic character and three numeric characters. The alphabetic characters are C, E and S and represent:

C = Goods for Consumption (Import)

E = Goods for Export

S = Goods entering a duty/tax Suspense regime.

The first of the numeric characters comes from the list:

Outright exportation	—	1
Temporary exportation	—	2
Re-exportation	—	3
Home Use	—	4
Temporary importation	—	5
Re-importation	—	6
Customs Warehousing	—	7
Transit	—	8
Other procedures	—	9

Use of the alphabetic character and the first number identifies the Regime i.e. C4 — import to Home Use, E1 — export.

The next two numbers represent the procedure under a particular regime. As far as possible these numbers reflect the logic applied to the initial coding for the regimes but in some instances the logic has to be varied because of the number of procedures involved.

General Rules for the Interpretation of the Harmonized System

Classification of goods in the Nomenclature shall be governed by the following principles:

1. The titles of sections, Chapters and sub-Chapters are provided for ease of reference only; for legal purposes, classification shall be determined according to the terms of the headings and any relative section or Chapter notes and, provided such headings or notes do not otherwise require, according to the following provisions:
 2.
 - (a) Any reference in a heading to an article shall be taken to include a reference to that article incomplete or unfinished, provided that, as presented; the incomplete or unfinished article has the essential character of the complete or finished article. It shall also be taken to include a reference to that article complete or finished (or falling to be classified as complete or finished by virtue of this Rule), presented unassembled or disassembled.
 - (b) Any reference in a heading to a material or substance shall be taken to include a reference to mixtures or combinations of that material or substance with other materials or substances. Any reference to goods of a given material or substance shall be taken to include a reference to goods consisting wholly or partly of the material or substance. The classification of goods consisting of more than one material or substance
- shall be according to the principles of Rule 3.
3. When by application of Rule 2(b) or for any other reason, goods are, prima facie, classifiable under two or more headings, classification shall be effected as follows:
 - (a) the heading which provides the most specific description shall be preferred to headings providing a more general description. However, when two or more headings each refer to part only of the materials or substances contained in mixed or composite goods or to part only of the items in a set put up for retail sale, those headings are to be regarded as equally specific in relation to those goods, even if one of them gives a more complete or precise description of the goods.
 - (b) Mixtures, composite goods consisting of different materials or made up of different components, and goods put up in sets for retail sale, which cannot be classified by reference to 3(a), shall be classified as if they consisted of the material or component which gives them their essential character, insofar as this criterion is applicable.
 - (c) When goods cannot be classified by reference to 3(a) or 3(b), they shall be classified under the heading which occurs last in numerical order among those which equally merit consideration.

4. Goods which cannot be classified in accordance with the above Rules shall be classified under the heading appropriate to the goods to which they are most akin.
5. In addition to the foregoing provisions, the following Rules shall apply in respect of the goods referred to:
 - (a) Camera cases, musical instrument cases, gun cases, drawing instrument cases, necklace cases and similar containers, specially shaped or fitted to contain a specific article or set of articles, suitable for long-term use and presented with the articles for which they are intended, shall be classified with the articles when they are of a kind normally sold with it. This Rule does not, however, apply to containers which give the whole its essential character;
 - (b) Subject to the Rule 5(a), packing materials and packing containers presented with the goods in it shall be classified with the goods if they are of a kind normally used for packing those goods. However, this provision does not apply when such packing materials or packing containers are clearly suitable for repetitive use.
6. For legal purposes, the classification of goods in the subheadings of a heading shall be determined according to the terms of those subheadings and any related subheading notes and, mutatis mutandis, to the above Rules, on the understanding that only subheadings at the same level are comparable. For the purposes of this Rule the relative section and Chapter notes also apply, unless the context otherwise requires.

Section I

Notes.

1. Any reference in this section to a particular genus or species of an animal, except where the context otherwise requires, includes a reference to the young of that genus or species.

(e) Halides of carboxylic acids are to be classified in the same headings as the corresponding acids.

6. The compounds of headings Nos. 2930.00 and 2931.00 are organic compound the molecules of which contain, in addition to atoms of hydrogen, oxygen or nitrogen, atoms of other non-metals or of metals (such as sulphur, arsenic, mercury or lead) directly linked to carbon atoms.

Heading No. 2930.00 (organo-sulphur compounds) and heading No. 2931 (other organo-inorganic compounds) do not include sulphonated or halogenated derivatives (including compound derivatives) which, apart from hydrogen, oxygen and nitrogen, only have directly linked to carbon the atoms of sulphur or of a halogen which give them their nature of sulphonated or halogenated derivatives (or compound derivatives).

7. Headings Nos. 2932.00, 2933.00 and 2934.00 do not include epoxides with a three-membered ring, ketone peroxides, cyclic polymers of aldehydes or of thioaldehydes, anhydrides of polybasic carboxylic acids, cyclic esters of polyhydric alcohols or phenols with polybasic acids or imides of polybasic acids.

These provisions apply only when the ring-position hetero-atoms are those resulting solely from the cyclizing function or functions here listed.

Subheading Note.

1. Within any one heading of this Chapter, derivatives of a chemical compound (or group of chemical compounds) are to be classified in the same subheading as that compound (or group of compounds) provided that they are not more specifically covered by any other subheading and that there is no residual subheading named "Other" in the series of subheadings concerned.

Section VII
Plastics and articles; rubber and articles

Notes.

1. Goods put up in sets consisting of two or more separate constituents, some or all of which fall in this Section and are intended to be mixed together to obtain a product of Section VI or VII, are to be classified in the heading appropriate to that product, provided that the constituents are:
 - (a) having regard to the manner in which they are put up, clearly identifiable as being intended to be used together without first being repacked;
 - (b) presented together; and
 - (c) identifiable, whether by their nature or by the relative proportions in which they are present, as being complementary one to another.
2. Except for the goods of heading No. 39.18 or 39.19, plastics, rubber, and articles thereof, printed with motifs, characters or pictorial representations, which are not merely incidental to the primary use of the goods, fall in Chapter 49.

Chapter 39

Plastics and articles

Notes.

1. Throughout the Nomenclature the expression “plastics” means those materials of heading Nos. 3901.00 to 3914.00 which are or have been capable, either at the moment of polymerization or at some subsequent stage, of being formed under external influence (usually heat and pressure, if necessary with a solvent or plasticizer) by moulding, casting, extruding, rolling or other process into shapes which are retained on the removal of the external influence.

Throughout the Nomenclature any reference to “plastics” also includes vulcanized fibre. The expression, however, does not apply to materials regarded as textile materials of Section XI.

2. This Chapter does not cover:

- (a) Waxes of heading No. 27.12 or 3404.00;
- (b) Separate chemically defined organic compounds (Chapter 29);
- (c) Heparin or its salts (heading No. 3001.00);
- (d) Stamping foils of heading No. 32.12;
- (e) Organic surface-active agents or preparations of heading No. 34.02;
- (f) Gum gums or ester gums (heading No. 3806.00);

- (g) Synthetic rubber, as defined for the purposes of Chapter 40, or articles;
- (h) Saddlery or harness (heading No. 4201.00) or trunks, suitcases, handbags or other containers of heading No. 42.02;
- (i) Plaits wickerwork or other articles of Chapter 46;
- (k) Wall coverings of heading No. 4814.00;
- (l) Goods of Section XI (textiles and textile articles);
- (m) Articles of Section XII (for example, footwear, headgear, umbrellas, sun umbrellas, walking-sticks, whips, riding-crops or parts);
- (n) Imitation jewellery of heading No. 7117.00;
- (o) Articles of Section XVI (machines and mechanical or electrical appliances);
- (p) Parts of aircraft or vehicles of Section XVII;
- (q) Articles of Chapter 90 (for example, optical elements, spectacle frames, drawing instruments);
- (r) Articles of Chapter 91 (for example, clock or watch cases);
- (s) Articles of Chapter 92 (for example, musical instruments or parts);

- (t) Articles of Chapter 94 (for example, furniture, lamps and lighting fittings, illuminated signs, prefabricated buildings);
 - (u) Articles of Chapter 95 (for example, toys, games, sports requisites); or
 - (v) Articles of Chapter 96 (for example, brushes, button, slide fasteners, combs, mouthpieces or stems for smoking pipes, cigarette-holders or the like, parts of vacuum flasks or the like, pens, propelling pencils.
3. Headings Nos. 3901.00 to 3911.00 apply only to goods of a kind produced by chemical synthesis, falling in the following categories:
- (a) Liquid synthetic polyolefins of which less 60% by volume distils at 300°C, after conversion to 1,013 millibars when a reduced-pressure distillation method is use (headings Nos. 3901.00 and 3902.00);
 - (b) Resins, not highly polymerized, of the coumaroneindene type (heading No. 3911.00);
 - (c) Other synthetic polymers with an average of at least 5 monomer units;
 - (d) Silicones (heading No. 3910.00);
 - (e) Resols (heading No. 3909.00) and other prepolymers.
4. For the purposes of this Chapter, except where the context otherwise requires, copolymers (including co-polycondensates, co-polyaddition products, block co-polymers and graft copolymers) and polymer blends are to

be classified in the heading covering polymers of that comonomer which predominates by weight over every other single comonomer, comonomers whose polymers fall in the same heading being regarded as constituting a single comonomer.

If no single comonomer predominates, copolymers or polymer blends, as the case may be, are to be classified in the heading which occurs last in numerical order among those which equally merit consideration.

The expression “copolymers” covers all polymers in which no single monomer contributes 95% or more by weight to the total polymer content.

- 5. Chemically modified polymers, that is those in which only appendages to the main polymer chain have been changed by chemical reaction, are to be classified in the heading appropriate to the unmodified polymer. This provision does not apply to graft copolymers.
- 6. In headings Nos. 3901.00 to 3914.00, the expression “primary forms” applies only to the following forms:
 - (a) Liquids and pastes, including dispersions (emulsions and suspensions) and solutions;
 - (b) Blocks of irregular shape, lumps, powders (including moulding powders), granules, flakes and similar bulk forms.
- 7. Heading No. 3915.00 does not apply to waste, parings and scrap of a single thermo-plastic material, transformed into primary forms (headings Nos. 3901.00 to 3914.00).

8. For the purposes of heading No. 39.17, the expression “tubes, pipes, and hoses” means hollow products, whether semi-manufactures or finished products, of a kind generally used for conveying, conducting or distributing gases or liquids (for example, ribbed garden hose, perforated tubes). This expression also includes sausage casings and other lay-flat tubing. However, except for the last-mentioned, those having an internal cross-section other than round, oval, rectangular (in which the length does not exceed 1.5 times the width) or in the shape of a regular polygon are not to be regarded as tubes, pipes, and hoses but as profile shapes.
 9. For the purposes of heading No. 39.18, the expression “wall” or ceiling coverings of plastics” applies to products in rolls, of a width not less than 45 cm, suitable for wall or ceiling decoration, consisting of plastics fixed permanently on a backing of any material other than paper, the layer of plastics (on the face side) being grained, embossed, coloured, design-printed or otherwise decorated.
 10. In headings Nos. 39.20 and 39.21, the expression “plates, sheets, film, foil and strip” applies only to plates, sheets, film, foil and strip (other than those of Chapter 54) and to blocks of regular geometric shape, whether or not printed or otherwise surface-worked, uncut or cut into rectangles (including squares) but not further worked (even if when so cut they become articles ready for use).
 11. Heading No. 39.25 applies only to the following articles, not being products covered by any of the earlier headings of sub-Chapter II.
- (a) Reservoirs, tanks (including septic tank), vats and similar containers, of a capacity exceeding 300 l;
 - (b) Structural elements used, for example, in floors, walls or partitions, ceilings or roofs;
 - (c) Gutters and fittings;
 - (d) Doors, windows and their frames and thresholds for doors;
 - (e) Balconies, balustrades, fencing, gates and similar barriers;
 - (f) Shutters, blinds (including Venetian blinds) and similar articles and parts and fittings;
 - (g) Large-scale shelving for assembly and permanent installation, for example, in shops, workshops, warehouses;
 - (h) Ornamental architectural features, for example, flutings, cupolas, dovecotes; and
 - (ij) Fittings and mountings intended for permanent installation in or on doors, windows, staircases, walls or other parts of buildings, for example, knobs, handles, hooks, brackets, towel rails, switch-plates and other protective plates.

Subheading Note.

1. Within anyone heading of this Chapter, copolymers (including co-polycondensates, co-polyaddition products, block copolymers and graft copolymers) are to be classified in the same subheading as homopolymers of predominant comonomer and chemically modified polymers of the kind specified in Chapter Note 5 are to be classified in the same subheading as the unmodified

polymer, provided that such copolymers or chemically modified polymers are not more specifically covered by any other subheading and that there is no residual subheading name "Other" in the series of subheadings concerned. Polymer blends are to be classified in the same subheadings as copolymers (or homopolymers, as the case may be) of the same monomers in the same proportions.

 - (a) Unsaturated synthetic substances which can be irreversibly transformed by vulcanisation with sulphur into non-thermoplastic substances which, at a temperature between 18°C and 29°C, will not break on being extended to three times their original length and will return, after being extended to twice their original length, within a period of five minutes, to a length not greater than one and a half times their original length. For the purposes of this test, substances necessary for the cross-linking, such as vulcanizing activators or accelerators, may be added; the presence of substances as provided for by Note 5 (b) (ii) and (iii) is also permitted. However, the presence of any substances not necessary for the cross-linking, such as extenders,
4. In Note 1 to this Chapter and in heading No. 4002.00, the expression “synthetic rubber” applies to:
 - (a) Unsaturated synthetic substances which can be irreversibly transformed by vulcanisation with sulphur into non-thermoplastic substances which, at a temperature between 18°C and 29°C, will not break on being extended to three times their original length and will return, after being extended to twice their original length, within a period of five minutes, to a length not greater than one and a half times their original length. - (ii) pigments or other colouring matter, other than those added solely for the purpose of identification;
- (iii) plasticisers or extenders (except mineral oil in the case of oil-extended rubber), fillers, reinforcing agents, organic solvents or any other substances, except those permitted under (b);
- (b) The presence of the following substances in any rubber or mixture of rubbers shall not affect its classification in heading No. 4001.00 or 4002.00, as the case may be, provided that such rubber or mixture of rubbers retains its essential character as a raw material:
- (i) emulsifiers or anti-tack agents;
- (ii) small amounts of breakdown products of emulsifiers;
- (iii) very small amounts of the following: heat-sensitive agents (generally for obtaining thermosensitive rubber latexes), cationic surface-active agents (generally for obtaining electro-positive rubber latexes), anti-oxidants, coagulants, crumbling agents, freeze-resisting agents, peptisers, preservatives, stabilizers, viscosity-control agents, or similar special-purpose additives.
6. For the purpose of heading No. 4004.00, the expression “waste, parings and scrap” means rubber waste, parings and scrap from the manufacture or working of rubber and rubber goods definitely not usable as such because of cutting-up, wear or other reasons.

10. The woven fabrics of Chapters 50 to 55 include fabrics consisting of layers of parallel textile yarns superimposed on each other at acute or right angles. These layers are bonded at the intersections of the yarns by an adhesive or by thermal bonding.
11. Elastic products consisting of textile materials combined with rubber threads are classified in this Section.
12. For the purposes of this Section, the expression “impregnated” includes “dipped”.
13. For the purposes of this Section, the expression “polyamides” includes “aramids”.
14. Unless the context otherwise requires, textile garments of different headings are to be classified in their own headings even if put up in sets for retail sale.

Subheading Notes:

1. In this Section and, where applicable, throughout the Nomenclature, the following expressions have the meaning thereby assigned to them:

(a) *Elastomeric yarn*

Filament yarn, including monofilament, of synthetic textile material, other than textured yarn, which does not break on being extended to three times its original length and which returns, after being extended to twice its original length, within a period of five minutes, to a length not greater than one and a half times its original length.

(b) *Unbleached yarn*

Yarn which:

- (i) has the natural color of its constituent fibres and has not been bleached, dyed (whether or not in the mass) or printed; or
- (ii) is of indeterminate color (“gray yarn”), manufactured from garneted stock.

Such yarn may have been treated with a colourless dressing or fugitive dye (which disappears after simple washing with soap) and, in the case of man-made fibres, treated in the

mass with delustring agents (for example, titanium dioxide).

(c) *Bleached yarn*

Yarn which:

- (i) has undergone a bleaching process, is made of bleached fibres or, unless the context otherwise requires, has been dyed white (whether or not in the mass) or treated with a white dressing;
- (ii) consists of a mixture of unbleached and bleached fibres; or
- (ii) is multiple (folded) or cabled and consists of unbleached and bleached yarns.

(d) *Coloured (dyed or printed) yarn*

Yarn which:

- (i) is dyed (whether or not in the mass) other than white or in a fugitive colour, or printed, or made from dyed or printed fibres;
- (ii) consists of a mixture of dyed fibres of different colours or of a mixture of unbleached or bleached fibres with coloured fibres (marl or mixture yarns), or is printed in one or more

colors at intervals to give the impression of dots;

- (iii) is obtained from silver or rovings which have been printed; or
- (iv) is multiple (folded) or cabled and consists of unbleached or bleached yarn and coloured yarn.

The above definitions also apply, *mutatis mutandis*, to monofilament and to strip or the like of Chapter 54.

(e) *Unbleached woven fabric*

Woven fabric made from unbleached yarn and which has not been bleached, dyed or printed. Such fabric may have been treated with a colourless dressing or a fugitive dye.

(f) *Bleached woven fabric*

Woven fabric which:

- (i) Has been bleached or, unless the context otherwise requires, dyed white or treated with a white dressing, in the piece;
- (ii) Consists of bleached yarn; or
- (iii) Consist of unbleached and bleached yarn.

(g) *Dyed woven fabric*

Woven fabric which:

- (i) is dyed a single uniform colour other than white (unless the context otherwise required) or has been treated with a coloured finish other than white (unless the context otherwise requires), in the piece; or
- (ii) consists of coloured yarn of a single uniform colour.

(h) *Woven fabric of yarns of different colours*

Woven fabric (other than printed woven fabric) which:

- (i) consists of yarns of different colours or yarns of different shades of the same colour (other than the natural colour of the constituent fibres);
- (ii) consists of unbleached or bleached yarn and coloured yarn; or
- (iii) consists of marl or mixture yarns.

(In all cases, the yarn used in selvages and piece ends is not taken into consideration).

(ij) *Printed woven fabric*

Woven fabric which has been printed in the piece, whether or not made from yarns of different colours.

(The following are also regarded as printed woven fabrics: woven fabrics bearing designs made, for example, with a brush or spray gun, by means of transfer paper, by flocking or by the batik process).

The process of mercerization does not affect the classification of yarns or fabrics within the above categories.

(k) *Plain weave*

A fabric construction in which each yarn of the weft passes alternately over and under successive yarns of the warp and each yarn of the warp passes alternately over and under successive yarns of the weft.

2. (A) Products of Chapters 56 to 63 containing two or more textile materials are to be regarded as consisting wholly of that textile material which would be selected under Note 2 of this Section for the classification of a product of Chapters 50 to 55 consisting of the same textile materials.

(B) For the application of this rule:

- (a) Where appropriate, only the part which determines the classification under Interpretative Rule 3 shall be taken into account;
- (b) In the case of textile products consisting of a ground fabric and a pile of looped surface no account shall be taken of the ground fabric;
- (c) In the case of embroidery of heading No. 5810.00 only the ground fabric shall be taken into account. However, embroidery without visible ground shall be classified with reference to the embroidering threads alone.

Chapter 54

Man-made filaments

Notes:

1. Throughout the Nomenclature, the term “man-made fibres: means stable fibres and filaments or organic polymers produced by manufacturing processes, either:

(a) By polymerization of organic monomers, such as polyamides, polyesters, polyurethanes or polyvinyl derivatives; or

(b) By chemical transformation of natural organic polymers (for example, cellulose, casein, proteins or algae), such as viscose rayon, cellulose acetate, cupro or alginates.

The term “synthetic” and “artificial”, used in relation to fibres, mean: synthetic: fibres as defined at (a); artificial: fibres as defined at (b).

The terms “man-made”, “synthetic” and “artificial” shall have the same meaning when used in relation to “textile materials”.

2. Headings Nos. 54.02 and 5403.00 do not apply to synthetic or artificial filament tow of Chapter 55.

3. Classification of alloys (other than ferro-alloys and master alloys as defined in Chapter 72 and 74):
- (a) An alloy of base metals is to be classified as an alloy of the metal which predominates by weight over each of the other metals;
 - (b) An alloy composed of base metals of this section is to be treated as an alloy of base metals of this Section if the total weight of the other elements present;
 - (c) In this Section the term “alloys” includes sintered mixtures of metal powders, heterogeneous intimate mixtures obtained by melting (other than cermets) and inter-metallic compounds.
4. Unless the context otherwise requires, any reference in the Nomenclature to a base metal includes a reference to alloys which,

by virtue of note 3 above, are to be classified as alloys of that metal.

5. Classification of composite articles:
Except where the headings otherwise require, articles of base metal (including articles of mixed materials treated as articles of base metal under Interpretative Rules) containing two or more base metals are to be treated as articles of the base metal predominating by weight over each of the other metals.

For this purpose:

- (a) Iron and steel, or different kinds of iron or steel, are regarded as one and the same metal;
- (b) An alloy is regarded as being entirely composed of that metal as an alloy of which, by virtue of Note 3, it is classified; and

- (c) A cermet of Heading No. 8113.00 is regarded as a single base metal.

6. In this Section, the following expressions have the meanings hereby assigned to them:

- (a) *Waste and scrap*

Metal waste and scrap from the manufacture or mechanical working of metals, and metal goods definitely not usable as such because of breakage, cutting up, wear or other reasons.

- (b) *Powders*

Products of which 90% or more by weight passes through a sieve having a mesh aperture of 1 mm.

2. For the classification of ferro-alloys in the sub-headings of heading No. 72.02 the following rule should be observed:

A ferro-alloy is considered as binary and classified under the relevant subheading if it exists) if only one of the alloy elements exceeds the minimum percentage laid down in Chapter Note 1(c); by analogy, it is considered respectively as ternary or quaternary if two or three alloy elements exceed the minimum percentage.

For the application of this rule the unspecified “other elements” referred to in Chapter Note 1© must each exceed 10% by weight.

Chapter 73

Articles of iron or steel

Notes.

1. In this Chapter the expression “cast iron” applies to products obtained by casting in which iron predominates by weight over each of the other elements and which do not comply with the chemical composition of steel as defined in Note 1 (d) to Chapter 72.
2. In this Chapter the word “wire” means hot or cold-formed products of any cross-sectional shape, of which no cross-sectional dimension exceeds 16mm.

Chapter 74

Copper and articles made of copper

Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

(a) *Refined copper*

Metal containing at least 99.85% by weight of copper; or metal containing at least 97.5% by weight of copper, provided that the content by weight of any other element does not exceed the limit specified in the following table:

TABLE – Other elements

Element	Limiting content % by weight
Ag Silver	0.25
As Arsenic	0.5
Cd Cadmium	1.3
Cr Chromium	1.4
Mg Magnesium	0.8
Pb Lead	1.5
S Sulphur	0.7
Sn Tin	0.8
Te Tellurium	0.8
Zn Zinc	1
Zr Zirconium	0.3
Other elements*, each	0.3

* Other elements are, for example, Al, Be, Co, Fe, Mn, Ni, Si.

(b) *Copper alloys*

Metallic substances other than unrefined copper in which copper predominates by weight over each of the other elements, provided that:

- (i) the content by weight of a least one of the other elements is greater than the limit specified in the foregoing table; or
- (ii) the total content by weight of such other elements exceeds 2.5%.

(c) *Master alloys*

Alloys containing with other elements more than 10% by weight of copper, not usefully malleable and commonly use as an additive in the manufacture of other alloys or of di-oxidants, desulphurising agents or for similar uses in the metallurgy of non-ferrous metals. However, copper phosphide (phosphor copper) containing more than 15% by weight of phosphorus falls in head No. 2848.00

(d) *Bars and rods*

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including “flattened circles” and “modified rectangles”, of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products, with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The

thickness of such products which have a rectangular (including “modified rectangular”) cross-section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

Wire-bars and billets with their ends tapered or otherwise worked simply to facilitate their entry into machines for converting them into, for example, drawing stock (wire-rod) or tubes, are however to be taken to be unwrought copper of heading No. 74.03.

(e) *Profiles*

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

(f) *Wire*

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole

length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including “flattened circles” and “modified rectangles”, of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including “modified rectangular”) cross-section exceeds one-tenth of the width.

In the case of heading No. 7414.00, however, the term “wire” applies only to products, whether or not in coils, of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

(g) *Plates, sheets, strip and foil*

Flat-surfaced products (other than the unwrought products of heading No. 74.03), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including “modified rectangles” of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the

- character of articles or products of other headings.

Headings Nos. 7409.00 and 7410.00 apply, *inter alia*, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

(h) *Tubes and pipes*

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along

their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygon cross-section, which may have corners rounded along their whole length, are also to be taken to be tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges.

Subheading Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

(a) *Copper-zinc base alloys (brasses)*

- Alloys of copper and zinc, with or without other elements. When other elements are present:
- zinc predominates by weight over each of such other elements;
- any nickel content by weight is less than 5% (see copper-nickel-zinc alloys (nickel silvers)); and

- any tin content by weight is less than 3% (see copper-tin alloys (bronzes)).

(b) *Profiles*

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

(c) *Wire*

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including “flattened circles” and “modified rectangles”, of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including “modified rectangular”) cross-section exceeds one-tenth of the width.

(d) *Plates, sheets, strip and foil*

Flat-surfaced products (other than the unwrought products of heading No. 8001.00), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including “modified rectangles” of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles or products of other headings.

Heading No. 8004.00 and 80.05 apply, *inter alia*, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

(e) *Tubes and pipes*

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or

regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygon cross-section, which may have corners rounded along their whole length, are also to be considered as tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

Subheading Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:
2. *Tin, not alloyed*

Metal containing by weight at least 99% of tin, provided that the content by weight of any bismuth or copper is less than the limit specified in the following table:

Table – Other elements

Element	Limiting content % by weight
Bi Bismuth	0.1
Cu Copper	0.4

(b) *Tin alloys*

Metallic substances in which the predominates by weight over each of the other elements, provided that:

- (i) the total content by weight of such other elements exceeds 1%; or
- (ii) the content by weight of either bismuth or copper is equal to or

greater than the limit specified in the foregoing table.

(o) Articles of Chapter 95.

2. Subject to Note 1 to this Section, Note 1 to Chapter 84 and to Note 1 to Chapter 85, parts of machines (not being parts of the articles of heading No. 8484.00, 85.44, 85.45, 85.46 or 85.47) are to be classified according to the following rules:

(a) Parts which are goods included in any of the headings of Chapters 84 or 85 (other than headings Nos. 84.85 and 8548.00) are in all cases to be classified in their respective headings;

(b) Other parts, if suitable for use solely or principally with a particular kind of machine, or with a number of machines of the same heading (including a machine of heading No. 84.79 or 85.43) are to be classified with the machines of that kind. However, parts which are equally suitable for use principally with the goods headings Nos. 85.17 and 85.25 to 85.28 are to be classified in heading No. 85.17;

(c) All other parts are to be classified in heading No. 84.85 or 8548.00.

3. Unless the context otherwise requires, composite machines consisting of two or more machines fitted together to form a whole and other machines adapted for the purpose of performing two or more complementary or alternative functions are to be classified as if consisting only of that component or as being that machine which performs the principal function.

4. Where a machine (including a combination of machines) consists of individual components (whether separate or interconnected by piping, by transmission devices, by electric cables or by other devices) intended to contribute together to a clearly defined function covered by one of the headings in Chapter 84 or Chapter 85, then the whole falls to be classified in the heading appropriate to that function.

5. For the purpose of these Notes, the expression, "machine" means any machine, machinery, plant, equipment, apparatus or appliance cited in the headings of Chapter 84 or 85.

Chapter 84

Nuclear reactors, boiler, machinery and mechanical Appliances; parts thereof

Notes.

1. This Chapter does not cover:
 - (a) Millstones, grindstones or other articles of Chapter 68;
 - (b) Appliances or machinery (for example, pumps) or parts thereof, of ceramic material (Chapter 69);
 - (c) Laboratory glassware (heading No. 7017.00); machinery, appliances or other articles for technical uses or parts thereof, of glass (heading No. 70.19 or 70.20);
 - (d) Articles of heading No. 73.21 or 7322.00 or similar articles of other base metals (Chapter 74 to 76 to 78 to 81);
 - (e) Electro-mechanical tools for working in the hand, of heading No. 85.08 or electro-mechanical domestic appliances of heading No. 85.09; or
 - (f) Hand-operated mechanical floor sweepers, not motorized (heading No. 96.03).
2. Subject to the operation of Note 3 to Section XVI, a machine or appliance which answers to a description in or more of the headings Nos. 84.01 to 84.24 and at the same time to a description in one or other of the headings Nos. 84.25 to 8480.99 is to be classified under the appropriate heading of the former group and not the latter.

Heading No. 84.19 does not, however, cover:

 - (a) Germination plant, incubators or brooders (heading No. 84.36);
 - (b) Grain dampening machines (heading No. 84.37);
 - (c) Diffusing apparatus for sugar juice extraction (heading No. 84.38);
 - (d) Machinery for the heat-treatment of textile yarns, fabrics or made up textile articles (heading No. 84.51) or
 - (e) Machinery or plant, designed for mechanical operation, in which a change of temperature, even if necessary, is subsidiary.

Heading No. 84.22 does not cover:

 - (a) Sewing machines for closing bags or similar containers (heading No. 84.52); or
 - (b) Office machinery of heading No. 84.72.

3. A machine-tool for working any material which answers to a description in heading No. 84.56.
4. Heading No. 8457.00 applies only to machine-tools for working metal (other than lathes) which can carry out different types of machining operations either:
 - (a) by automatic tool change from a magazine or the like in conformity with a machining programme (machining centres),
 - (b) by the automatic use, simultaneously or sequentially, or different unit heads working on a fixed position work-piece (unit construction machines, single station), or
 - (c) by the automatic transfer of the work-piece to different unit heads (multi-station transfer machines).
5. (A) For the purposes of heading No. 84.71, the expression “automatic data processing machines” means:
 - (a) Digital machines, capable of (1) storing the processing program or programs and at least the data immediately necessary for the execution of the program; (2) being freely programmed in accordance with the requirements of the user; (3) performing arithmetical computations specified by the user; and, (4) executing, without human intervention, a processing program which requires them to modify their execution, by logical decision during the processing run;
 - (b) Analogue machines capable of simulating mathematical models and comprising at least: analogue elements, control elements and programming elements;
 - (c) Hybrid machines consisting of either a digital machine with analogue elements or analogue machine with digital elements.
- (B) Automatic data processing machines may be in the form of systems consisting of a variable number of separately-housed units. A unit is to be regarded as being part of the complete system if it meets all the following conditions:
 - (a) it is connectable to the central processing unit either directly or through one or more other units;
 - (b) it is specifically designed as part of such a system (it must, in particular, unless it is a power supply unit, be able to accept or deliver data in a form (code or signals) which can be used by the system).

Such units presented separately are also to be classified in heading No. 84.71.

Heading No. 84.71 does not cover machines incorporating or working in conjunction with an automatic data processing machine and performing a specific function. Such machines are classified in the headings appropriate to their

respective functions or, failing that in residual headings.

6. Heading No. 8482.00 applies, *inter alia*, to polished steel balls, the maximum and minimum diameters of which do not differ from the nominal diameter by more than 1% or by more than 0.05 mm, whichever is less. Other steel balls are to be classified in heading No. 73.26.
7. A machine which is used for more than one purpose is, for the purposes of classification, to be treated as if its principal purpose were its sole purpose.

Subject to Note 2 to this Chapter and Note 3 to Section XVI, a machine the principal purpose of which is not described in any heading or for which no one purpose is the principal purpose is, unless the context otherwise requires, to be classified in heading No. 84.79. Heading No. 84.79 also covers machines for making rope or cable (for example, stranding, twisting or cabling machines) from metal wire, textile yarn or any other material or from a combination of such materials.

Chapter 85

Electrical machinery and equipment and parts thereof; sound recorders and reproducers, television image and sound recorders and reproducers, and parts and accessories of such articles

Notes.

1. This Chapter does not cover:
 - (a) Electrically warmed blankets, bed pads, foot-muffs or the like; electrically warmed clothing, footwear or ear pads or other electrically warmed articles worn on or about the person;
 - (b) Articles of glass of heading No. 70.11; or
 - (c) Electrically heated furniture of Chapter 94.
2. Headings Nos. 85.01 to 85.04 do not apply to goods described in heading No. 85.11, 85.12, 85.40, 85.41 or 85.42.

However, metal tank mercury arc rectifiers remain classified in heading No. 85.04.
3. Heading No. 85.09 covers only the following electro-mechanical machines of the kind commonly used for domestic purposes:
 - (a) Vacuum cleaners, floor polishers, food grinders and mixers, and the fruit or vegetable juice extractors, or any weight;
 - (b) Other machines provided the weight of the machines does not exceed 20 kg.

The heading does not, however, apply to fans or ventilating or recycling hoods incorporating a fan, whether or not fitted with filters (heading no. 84.14), centrifugal clothes-dryers (heading No. 84.21) dish washing machines (heading No. 84.22) household washing machines (heading No. 84.50), roller or other ironing machines (heading No. 84.20 or 84.51), sewing machines (heading No. 85.2), electric scissors (heading No. 85.08) or to electro-thermic appliances (heading No. 85.16).

4. For the purposes of heading No. 8534.00 “printed circuits” are circuits obtained by forming on an insulating base, by any printing process (for example, embossing, plating-up, etching) or by the “film circuit” technique, conductor elements, contracts or other printed components (for example, inductances, resistors, capacitors) alone or interconnected according to a pre-established pattern, other than elements which can produce, rectify, modulate or amplify an electrical signal (for example, semiconductor elements).

The term “printed circuits” does not cover circuits combined with elements other than those obtained during the printing process. Printed circuits may, however, be fitted with non-printed connecting elements. Thin- or thick-film circuits comprising passive and active elements obtained during the same

technological process are to be classified in heading No. 85.42.

5. For the purposes of headings Nos. 85.41 and 85.42:

(A) “Diodes, transistors and similar semiconductor devices: are semiconductor devices the operation of which depends on variations in resistivity on the application of an electric field;

(B) “Electronic integrated circuits and micro assemblies” are:

(a) Monolithic integrated circuits in which the circuit elements (diodes, transistors, resistors, capacitors, interconnections, etc.) are created in the mass (essentially) and on the surface of a semiconductor material (doped silicon, for example) and are inseparably associated;

(b) Hybrid integrated circuits in which passive elements (resistors, capacitors, interconnections, etc.), obtained by thin- or thick-film technology, and active elements (diodes, transistors, monolithic integrated

circuits, etc.), obtained by semiconductor technology, are combined to all intents and purposes indivisibly, on a singly insulating substrate (glass, ceramic, etc.). These circuits may also include discrete components;

(c) Microassemblies of the moulded module, micro-module or similar types, consisting of discrete, active or both active and passive, components which are combined in interconnected.

For the classification of the articles defined in this Note, headings Nos. 85.41 and 85.42 shall take precedence over any other heading in the Nomenclature which might cover them by reference to, in particular, their function.

6. Records, tapes and other media of heading No. 85.23 or 85.24 remain classified in those headings, whether or not they are presented with the apparatus for which they are intended.
